Bassett Creek Stream and Habitat Restoration Implementation Plan

October, 2007
The preferred design concept for Bassett Creek Commons includes a rehabilitated Bassett Creek with functioning riparian habitat, an expanded floodway, and large meanders. Upland areas are converted to naturalized prairie, and a savanna extends from the existing tree canopy to the south. Open space components include a system of iconic bridges and internal trails with links to the neighborhood. The Luce Line Regional Trail enters the Commons via a railroad underpass (currently active) and links to Van White Memorial Boulevard. The primary use area is a great lawn which serves as an informal gathering place and leads to views of the revitalized creek and to a learning terrace with interpretive opportunities. Major entry points connect to Cedar Lake Road both north and south of the creek and to Van White Memorial Boulevard at a new parkway road.
