Re: 2017 Plymouth Creek Restoration Project, 90% Plan Set Review (BCWMC CIP 2017CR-P)

Dear Mr. Asche:

The Bassett Creek Watershed Management Commission (BCWMC) reviewed the 90% design plans for the above-referenced project. This project includes restoring sites along the 2,500-foot reach of Plymouth Creek in Plymouth Creek Park and west of Annapolis Lane North. The 90% design plans were reviewed in accordance to the BCWMC's CIP project timeline (flowchart).

The BCWMC conditionally approved the plans at its August 17, 2017 meeting, contingent on the final plan set incorporating or addressing the following comments:

1. Modeling or other documentation must be submitted to verify no change in the flood level caused by the proposed design.
2. Erosion control and seeding plans must be revised to show the correct hatching, show anticipated stabilization, and add erosion control measures for the full extent of anticipated disturbed areas within the construction limits and access paths.
3. Include educational signage in the construction budget and increase the budget to \$4,000.
4. Remove disc stop poles from project (Bid Item ALT-1) and replace with "tree protection" bid item, with a cost estimate not to exceed \$42,750.
5. Work with Plymouth Parks staff to consider temporary or permanent fairway re-alignments to protect the creek.
6. The final plans must be submitted to the BCWMC Engineer for administrative review and approval after modifications have been completed.
