

Alt 1: Re-meander into historic channels in upper third of reach

Alt 2: Narrow the stream channel through straightened section, create vegetated bank and bench

Reach 1

Alt 3: Install fencing and shade tolerant vegetation to establish vegetative buffer on creek banks

Alt 4: Stabilize steep eroding bank

4a) Hard armor/riprap4b) Bioengineering/VRSS

Reach 1

Issues: Appears to be historically straightened; channel is overwide with bare banks. Significant bare overbank areas due to disc golf usage. High clay content of soils helps reduce bank movement.

Constraints: Restoration must be compatible with disc golf course; need for bridge crossings. Narrow valley and low slope limit meandering potential. Deep shade limits vegetation options.
